The diagram illustrates the mapping of a physical system to a stream-based representation. It is organized into three rows, each with a physical feature on the left and its corresponding stream-based representation on the right.

- Row 1:** A **Highway** is mapped to a **Pipe/Power Line**, which is represented as a **Stream/Shortline**.
- Row 2:** A **Secondary Road** is mapped to a **Rigidity/Physical Feature**, which is represented as an **Intermittent Stream**.
- Row 3:** A **Junction/Stream Confluence** is mapped to a **Property/Facets Line**, which is represented as a **River/Lake**.

Below these mappings are three diagrams illustrating boundary types:

- Railroad:** A diagram showing a track with a **Nonsynchronous Boundary** (indicated by a dashed line) and a **Synchronous Boundary** (indicated by a solid line).
- Inset:** A diagram showing a rectangular area with a **Nonsynchronous Boundary** (indicated by a dashed line) and a **Synchronous Boundary** (indicated by a solid line).
- Out Area:** A diagram showing a rectangular area with a **Nonsynchronous Boundary** (indicated by a dashed line) and a **Synchronous Boundary** (indicated by a solid line).

Where international, state, and/or county boundaries coincide, the map shows the boundary symbol for only the highest-ranking of these boundaries.

- 1 A \* \* following a place name indicates that the place is cointensive with a MCD; A \* \* indicates that the place is also a false MCD; the false MCD name is not shown.
- 2 A \* \* following a block number indicates that the block number is repeated elsewhere in the block.
